### EnSave Launches Farm Energy Audit Tool

Richmond, VT, May 2011

EnSave is pleased to announce the release of its Farm Energy Audit Tool (FEAT), a full-featured software solution that will enable users to access EnSave's twenty years of agricultural energy conservation expertise and create their own farm energy audits. The audits analyze current energy use and make specific recommendations for future energy efficiency and conservation.

EnSave is the United States' leading provider of farm energy audits and farm energy management plans, and provides FEAT for the use by utilities, state energy offices, residential/commercial auditing firms, and contractors. Its simple interface allows for the creation of a full narrative energy audit report following the input of farm energy data.

"There are a lot of entities who want to offer farm energy audits but lack the in-house engineering expertise to offer audits or energy management plans," says Craig Metz, EnSave's President and CEO. "EnSave is here to assist them." The FEAT simplifies the auditing process by using EnSave's energy efficiency calculations, which have been honed by 20 years in business and approved by numerous utilities, state energy offices, and utility commissions. FEAT users can turn to EnSave for review and certification in order to tap into federal programs such as USDA Natural Resources Conservation Service's Agricultural Energy Management Plans.

The FEAT is immediately available for lease, and can be used by organizations or individuals wishing to provide high-quality energy audits to farmers. "This is not an online energy assessment tool. It is a fully functioning and robust audit creation application," says David Deforge, Product Manager for FEAT, "Users of FEAT do not have access just to EnSave's expertise, but to every aspect of the audit and management plan creation process, from initial contact to data collection to report creation, with a tracking component that allows them to know at what stage in the process all of their outstanding audits are." The company encourages interested people to call EnSave at (800) 732-1399 for more information and to request a demonstration of the software.

**About EnSave:**

EnSave supports the American agricultural sector with innovative energy efficiency and resource conservation programs. EnSave provides agricultural producers and food processors with cost effective ways to reduce operating costs while saving energy while conserving our nation's resources. EnSave's clients include state and federal energy and environmental agencies, investor-owned utilities, and rural electric cooperatives. EnSave implements its programs by developing relationships with equipment manufacturers, local equipment dealers, and the local agricultural community. Ultimately, these programs promote economic investment in the rural economy and improve the quality of America's land, air, and water.
